Dear Peter,

Enclosed you will find the response to the information the EPA had requested. I apologize for the delay in getting you the information. We were in the process of moving and things were a little hectic. I have read all the information you have sent me, and still await the info on the normal levels of substances at that sight. In reading the documentation that you sent, I noticed that it was stated about drains being put in when the complex was paved. This was not the case. In fact the paving made it worse, which added to our reasons for moving out of the premises. Every time it would rain, tons of water would flood our building, ruining cardboard and rusting metal parts on our floor. I personally had to take a shovel and break apart the asphalt that was covering the small drain that was there prior to the paving. The flooding building was a constant problem and IM sure still has to be delt with. DSC was very laxed on there upkeep on the premises and seemed the only time action was taken was when the EPA stepped in and insisted on paving. IM not sure if you're aware of the flooding or not, but I thought I'd just include this letter to further help you out. Also look into the space in between my building and the one next door. Every time it rains, at least 3 to four feet of water will rise in the middle of the two buildings, causing smell and again flooding. I don't know if its because of poor maintenance or what, but I do know that this problem was there before the paving took place. Just thought you should know. If you have any questions or comments about the enclosed ...please call me.

Thanks

Sincerely,

Mark French
